Intech Automation is a Honeywell Factory Authorized installer and a Building Controls Specialist serving the Northern California Area. Our Tridium N4 Certified Technicians can address all your building control system needs. We support the Honeywell Niagara WEBS Controls platform in both LON and BACnet Communications. We can integrate with older Legacy Systems as well as supply new state of the art systems to suit your needs. These types of systems can scale down to individual buildings and up to larger enterprise portfolios.

At Intech Automation we offer custom graphic packages so the visibility into your system is an interactive experience and can give you all the information you need at a glance. We also offer Building and Equipment Analytics packages so that you can determine the health of your building by using predictive maintenance measures. We can provide tenant building packages that generate monthly usage invoices saving you time and money.

Intech Automation is a Johnson Controls Authorized Building Specialist. This platform is designed for the larger building portfolios and can be implemented by our factory certified technicians. Whether it is for new installation, maintenance, or retro-commissioning we have the control expertise to service your particular needs.

Intech Automation has many controls options to fit your needs. Many times, the cost of controlling a building can seem to be an expensive proposition but at Intech Automation we can find solutions that can scale down and be cost effective for your particular situation. Pelican Wireless is a small building solution that gives you some of the same control and visibility to your HVAC with out the high costs of full-scale Building Management Systems.

At Intech Automation we offer a Niagara Cloud Server that interfaces with Pelican Controls to allow for site wide custom graphic packages so the visibility into your system is an interactive experience and can give you all the information you need at a glance. We also offer Building and Equipment Analytics packages so that you can determine the health of your building by using predictive maintenance measures. Our new AQI integration can control your economizers on days with unhealthy conditions or local air quality emergencies.
